

Centrifugal Pumps for Water

Sumo submerged centrifugal pumps are designed to handle clear water at moderate head.

Benefits

1. Long, efficient unit life.
2. Minimum power consumption.
3. Standardised and accurately machined parts for proper alignment and enhanced durability.
4. Dynamically balanced impellers with single inlet to practically eliminate thrust.
5. Low maintenance and higher operating efficiency.

Applications

1. Water supply
2. Lifting water from canals, rivers, dams, jack wells, large, lakes, etc.
3. Water effluent treatment plant
4. Steel and cement plant
5. Port and docks

Range	
Capacity	Upto 2000 m ³ /hrs
Head	Upto 120 m
Enclosure / protection	IP 68
RPM	960/1450/2990
